--	----------------------------	------------------------	-----

### Verify all LIFS are on home ports before upgrade

During a reboot, some LIFs might have been migrated to their assigned failover ports. Before and after you upgrade a cluster, you must enable and revert any LIFs that are not on their home ports.

The network interface revert command reverts a LIF that is not currently on its home port back to its home port, provided that the home port is operational. A LIF's home port is specified when the LIF is created; you can determine the home port for a LIF by using the network interface show command.

1. Display the status of all LIFs: network interface show

This example displays the status of all LIFs for a storage virtual machine (SVM).

data001       down/down       192.0.2.120/24       node0       e0e         true       data002       down/down       192.0.2.121/24       node0       e0f         true       data003       down/down       192.0.2.122/24       node0       e2a         true       data004       down/down       192.0.2.123/24       node0       e2b         true       data005       down/down       192.0.2.124/24       node0       e0e         false       data006       down/down       192.0.2.125/24       node0       e2a         false       data007       down/down       192.0.2.126/24       node0       e2a         false       data008       down/down       192.0.2.127/24       node0       e2b		Logical	Status	Network	Current

If any LIFs appear with a Status Admin status of down or with an Is home status of false, continue with the next step.

2. Enable the data LIFs: network interface modify {-role data} -status-admin up

cluster1::> network interface modify {-role data} -status-admin up
8 entries were modified.

3. Revert LIFs to their home ports: network interface revert \*

This command reverts all LIFs back to their home ports.

```
cluster1::> network interface revert *
8 entries were acted on.
```

4. Verify that all LIFs are in their home ports: network interface show

This example shows that all LIFs for SVM vs0 are on their home ports.

<pre>cluster1::&gt; network interface show -vserver vs0</pre>
